

ARRIVING TOGETHER

VELOCITI ENTERPRISE

GOOD RELATIONSHIPS HAVE BOUNDARIES.

Your agents should too.

VELOCITI ONE | Kept in your office.

ONE RACK.
ONE SEARCHABLE WORK RECORD.
ONE CONTINUOUS TASK STATE.
ONE GOVERNED CONTROL PLANE.

YOUR AI. YOUR DATA.

THE ENTERPRISE PROPOSITION

AI Capability, In Your Office. **Your Data, Fixed Capex.**

Velociti joins company workspaces, private intelligence, persistent agents, controlled tools, institutional memory, and customer-owned compute into one operating environment.

WHAT CHANGES

AI stops being a collection of disconnected chats and subscriptions. It becomes a company-operated capability where you own and control your data and IP, retain a reusable work record, and route outside intelligence deliberately.

INSIDE THE COMPANY BOUNDARY

Approved frontier routes enter by policy

People and workspaces

Departments work inside separated spaces. Approved folders enable collaboration without exposing protected records.
Clear ownership without creating new silos.

Context and memory

Relevant files, conversations, decisions, project history, procedures, actions, evidence, and accepted results form a company-held record.
Only useful and permitted context enters each task.

Intelligence

Velociti routes work among local models, private servers, and approved frontier models according to capability, privacy, cost, and policy.
Owned capacity first. External judgment when it earns its place.

Action and authority

Hermes agents, tools, MCP, A2A, repositories, browsers, terminals, and business systems operate through defined permissions and review points.
Automation receives scope, not blanket power.

Proof and continuity

Model routes, token use, tool activity, changes, approvals, errors, evidence, task state, and outcomes remain inspectable and recoverable.
Company work survives model and employee changes.

PRODUCT PROOF • MANAGED MODELS

VEL-STOP-TEST-A-20260801 Act a... WhiskyAKM/Qwen3.6-35B-A3B-NVFP4-GGUF X

WhiskyAKM/Qwen3.6-35B-A3B-NVFP4-G

Custom Local Chat Model

Velociti Native Local model for chat, coding, and agent workflows with tool use, reason

SIZE	WEIGHTS	GGUF local	PRICE	FILE	Local	Text	Tools	Reasoning
35B A3B			\$0/\$0 / 1M tokens	202 GB	Local	Text	Tools	Reasoning

- This LLM is downloaded and installed.
- LLM is current as of August 11, 2026.
- This LLM passed Velociti local validation. Model has reduced input tokens to 32k tokens to stable memory.
- Native local runtime connected; exact process and model verified.

Installed, validated, and company controlled.

Local model identity, capability, runtime connection, and health are checked before use.

PRODUCT PROOF • HARDWARE FIT

Maximum generated tokens.

Max input tokens 48000

Maximum prompt/context budget.

Requested 128,000 tokens, using 48,000 tokens because the adaptive VRAM optimizer selected the highest safe value. Prompt selection, token checks, chat history, workspace metadata, and final send use this proved runtime cap.

Screen VRAM reserve (in MiB) 512

VRAM kept free for display and desktop use.

This is the hard display reserve. This use value is preserved exactly. Runtime calculations still enforce a 512 MiB safety floor internally while the separate runtime reserve starts as a 25 percent cushion and may flex downward only if full-offload/context proof stays under the 90 percent VRAM safety gate.

Enable thinking

Allow supported reasoning mode. ☐ Thinking off

Temperature

Randomness and variety. 0 2 0.70

GGUF memory refresh

Tuned to installed hardware.

Context and memory limits follow measured headroom instead of a generic default.

VELOCITI ONE

The capability has a place to live.

The Box delivers un-moated free* tokens.

*Excluding initial set up costs, upgrades and electricity

One Box, AI Enterprise Server, Company Wide Service and Security

Keep routine intelligence close. Route exceptions deliberately. Retain the accepted record.

HOW GOVERNED WORK HAPPENS

One request. Governed from question to record.

Velociti carries business context, selected intelligence, bounded authority, visible action, human review, and retained evidence through one continuous task.

EXAMPLE REQUEST

Product asks Velociti to prepare a launch plan using product materials, previous decisions, and one budget summary approved by Accounts.

Boundary established

Approved summary available.
Accounts workspace protected.

Request

The user asks in ordinary language from an identified workspace. Project, owner, delivery context, and trust state travel with the request.

Identified purpose and owner

Approved context

Velociti retrieves product material, earlier decisions, and the approved budget summary. Underlying Accounts records stay outside the task.

Relevant context with bounded access

Intelligence routing

A local model handles private preparation and recurring work. Approved frontier intelligence reviews selected context when stronger judgment earns the cost.

Spend and exposure follow value

Agents and tools

Cross-agent orchestration coordinates Hermes agents as they research, draft, verify, and review. Cross-chat handoff carries approved context, ownership, checkpoints, tools, evidence, and task state.

Cross-chat and cross-agent work without lost state

Authority and proof

Sentinel applies identity, purpose, file and network scope, tool gates, leases, and human approvals. Activity remains visible and challengeable.

No agent receives blanket authority

Retained result

The request, approved context, models, token receipts, actions, edits, approvals, errors, evidence, and final result remain connected and searchable.

A reusable company work record

Velociti Inhouse vs Moated Cloud

DECISION LENS	Option 1 • Velociti One Owned enterprise AI	Option 2 • Centralized AI External provider dependency
ECONOMICS	Enterprise server, software, yearly maintenance, and an internal IT team to manage it	Unpredictable monthly fees, subscriptions, and API costs
DATA AND IP	Company-held inside an owned environment	Sent to external parties inside a moated system
SECURITY AND COMPLIANCE	Controls defined and operated by the company	Changing security layers and compliance uncertainty

LIVE SENTINELS

2 CARDBOXES

Hermes prompt lab Sentinel

Running

Create Hermes, run Gemma prompt research, and generate six Image 2 panels.

1 bot under control | GitOpsLinked deployment | approved-web-search | expires in 8433h 7m

Sentinel | Sentinel + Charon + rancher-Local | Hermes | desktop:/local/mobv

deployment:sentinel-hermes-prompt-lab-1785236461638

bots:1 | gates:7 | health:GitOpsLinked | hermes-only

sha256:05228d6c9ebfb025281bc477

Bounded persistent work. A live Sentinel records purpose, bot relationship, gates, deployment health, and expiry.

Scope Tool Gate- MCP server

Approval Required

MCP tool request:

Tool authority policy requires confirmation (VELOCITY_TOOL_SCOPE_MCP_EXACT_TOOL_ASK)

Evaluate JavaScript expression on page or element

Input

```
{ "function": "()" => { const { readFileSync } = require('fs'); try { const conten
```

Note that MCP servers or malicious conversation content may attempt to misuse "Velociti" through tools.

This request needs current-turn review. Saved authority cannot bypass it.

Exclude this

Call once

Stop

Connection is not permission. An MCP tool still stops for current-turn approval when policy requires it.

FROM REQUEST TO RETAINED RESULT

WHAT THE COMPANY GAINS AND RETAINS

AI becomes a company capability.

This allows for Distinct, Searchable and Company-Held Data.

Four assets the company keeps

CAPACITY Intelligence routed by value Customer-owned capacity handles suitable recurring work. Hermes agents can use quieter hours. Approved frontier intelligence remains available where stronger capability justifies the cost.	KNOWLEDGE Institutional memory with boundaries Projects, decisions, procedures, conversations, prompts, sources, actions, artifacts, evidence, and accepted outcomes become searchable without blending protected contexts.	CONTROL Authority outside the model Workspace boundaries, file segmentation, tool gates, identity, permissions, Sentinel, human review, audit history, and Error Control remain independent of any one model.	PORTABILITY Freedom to change intelligence Models, providers, tools, frameworks, accelerators, and endpoints may change while company workspaces, memory, authority, evidence, and procedures remain.
--	---	---	---

BILLABLE EXPERT SERVICES

Velociti-trained engineers, tailored to your operation.

Services are delivered in billable hours. Scope, estimate, and acceptance criteria are agreed before work begins.

Set up and handover Configure models, workspaces, permissions, tools, agents, data boundaries, and operating baselines. Document the environment and hand it over to internal IT. A working system your team can own	Troubleshoot and recover Trace model, memory, tool, integration, agent, and workflow failures through system evidence. Repair the issue, prove recovery, and record what changed. Diagnosis tied to evidence and tested recovery	Design tailored workflows Translate a real business process into scoped agents, approvals, tool gates, monitoring, and retained records that match company rules and risk. Automation designed around how your company works
--	--	--

Not another AI subscription. A company capability.

Velociti joins customer-owned intelligence, governed automation, institutional memory, visible proof, deployment, training, handover, lifecycle support, and recovery into one operating relationship.

Your models.
Your workspaces.
Your rules.
Your records.
Your capacity.

Use owned capacity where it fits.

Routine intelligence becomes planned infrastructure instead of an open-ended external meter.

Route exceptions deliberately.

Approved frontier models remain available when their capability is worth the added cost and exposure.

Keep the accepted record.

Company memory, authority, evidence, and procedures remain after models or employees change.

Deployment, model routes, and capacity are qualified against customer workload, policy, facilities, and accepted performance.
